UST Rule Deadline Looming

UST REGULATIONS
Due May 26th

Generator UST Piping Version 1

dhec
Healthy People. Healthy Communities.

- Underground supply and return lines slope back to tank.
 - Supply is "suction"
 - Return is "gravity"
- Fuel is dispensed at a higher elevation than tank top
 - Supply Line:
 - If only check valve is at suction pump then safe suction. Exempt from leak detection. Requires a UST-19 form.
 - If check valve is at tank then supply is standard suction. Requires LTT every 3 years.
 - Return Line:
 - Fuel flows back to tank by gravity once day tank full. If pipe has a leak, fuel could still continuously flow out of pipe so an annual LTT or monthly interstitial monitoring is required. Containment sumps used for interstitial monitoring also must be tightness tested every 3 years.

The final requirements from the phase-in of the 2015 federal UST regulations are just around the corner. **The new requirement deadline is next**

Tuesday, May 26th.

Click the link below to see what is due by next week.

Tobacco Grassroots Tool: Own It. Voice It.

Attention SCCPMA Members,

Reynolds has developed a new resource on the ***Own It Voice It (OIVI)*** platform designed to assist in the activation of Trade Partners who are willing to **engage on tobacco-related issues.**

Our industry is seeing a period of heightened legislative/regulatory activity. We now have a way for **Trade Partners to get involved and be more proactive in having their voice heard.**

Recognizing this, RAI TMS External Relations is pleased to announce a first-in-the-industry benefit that focuses on making it easier for our Trade Partners to act and engage against potential threats that could affect their business and livelihood. We've enhanced our agreement with an existing outside firm that will accommodate the needs of our Trade Partners, specifically in their efforts to voice their positions and drive positive outcomes. The overall goal of the sign-up process is to create a **quality** database of customers willing to engage when legislative and regulatory proposals threaten their business.

To Participate you simply sign up via this website. We will send updates on issues affecting the industry to help keep you better informed.

Welcome New Associate Member

Optic Fuel Clean of NC inspects and removes water, loose sludge, bacteria and sediment from fuel in UST's and AST's. A 7-stage filtration process is used to remove the contamination and return the good fuel back into the tank and only discard the unwanted waste. This innovative process visually inspects and cleans the fuel at the same time while your customers continue to pump their fuel so there is no tank downtime! We are servicing all of the southeast and inland states.

Chris Behrens
